

Gender Pay Differentials
Cross-National Evidence from Micro-Data
Benoît Mahy, Robert Plasman and François Rycx

Description

Pay inequalities between women and men are a key issue for labour market policy. This book provides new evidence on the magnitude and sources of these pay inequalities in European countries and New Zealand on the basis of micro data. Particular attention is devoted to job access and workplace practices, promotions and wage growth, sectoral affiliation and rent-sharing, and unobserved heterogeneity and dynamics.

Contents

List of Tables and Figures

Notes on the Contributors

Introduction; *B.Mahy, R.Plasman & F.Rycx*
